

7000 Medical & Pharmaceutical WVTR

Precision water vapour permeability analysis of medical & pharmaceutical packaging

Applications

Pharmaceutical packaging
Bottles
Pill containers
Closures
Surgical dressings
Syringe products
Bags
Needles

Features & Benefits

- Analytical Systems Manufactured traceable to NIST.
- System validation with certified gas or film for speed and convenience.
- Absolute moisture measurement - No calibration required.
- Wide measurement range.
- Over 25 yrs experience of Proprietary Coulometric P₂O₅ sensor.
- Flow, temperature and humidity control for ultimate responsiveness and repeatability.
- Intuitive Windows based software.
- No liquid coolants, catalysts or special gas mixtures required.

Why measure permeability?

The measurement of permeation is often critical in medical and pharmaceutical applications:
- for protection
- to prevent contamination
- to extend the shelf life and potency of drugs
- to ensure powders do not clog

Permeability testing is used in the design and manufacture of blister packs, bottles, pill containers, surgical dressings, needles and syringe products.

Package integrity is necessary to maintain the quality of a drug product throughout its shelf life. Therefore the container and closure need to demonstrate their suitability to the product. The permeation of moisture through a package is a critical quality attribute for solid oral dosage forms, with moisture uptake being a common cause for product package failures.

The 7000 permeation analysers can assist in fulfilling your medical and pharmaceutical packaging requirements.
Our test laboratory will perform your Permeation Testing and Headspace Analysis. Whether you are developing innovative materials and packages or validating that your supplier is meeting specification. We can exceed your expectations with:

- Competitive Prices
- Fast Turnaround
- Independent non-biased results
- 25 Years Experience

Manufacture traceable to NIST

All Systech Illinois analysers are certified traceable to NIST. In addition, analytical performance is validated using NIST certified gases and NIST traceable films. A set of validation films and a spare P₂O₅ sensor comes as standard with all of the water vapour permeation analysers.

P₂O₅ Sensor Technology

The two most common sensor types for measuring moisture are IR (infra-red) and P₂O₅ (phosphorous pentoxide). The P₂O₅ sensor is more sensitive and stable than IR and does not require calibration. P₂O₅ is the primary method for absolute moisture measurement. Systech Illinois have over 25 years experience of using P₂O₅ sensor technology.

*The Systech Illinois 7000 analysers comply with ASTM standard F-1249 with the exception of the sensor technology. The standard relates to an infra-red sensor whilst the Systech Illinois analyser uses a coulometric sensor - a dedicated method of moisture analysis.

Wide measurement range

The 7000 series offer a wide measurement range providing research grade flexibility.

- Measurement range of 0.002-1000 g/m²/day with masking.
- Quality Assurance orientated speed and agility.
- Up to five expansion modules available to increase testing throughput.

Precision control

These analysers offer precision temperature and humidity flow control providing ultimate responsiveness and repeatability.

- Test gas and carrier flow gas controlled by premium electronic mass flow controllers.
- Accurate relative humidity range from 20% to 90%.
- Wide sample temperature range of 5 to 50°C (41 to 122°F).

Laboratory Testing Services

Our test laboratory will perform your Permeation Testing and Headspace Analysis. Whether you are developing innovative materials and packages or validating that your supplier is meeting specification. We can exceed your expectations with:
**21CFR Software**

Used in conjunction with Microsoft® Windows.

- Password protected User Log-In.
- Test files are encrypted and cannot be altered.
- Audit files are created and encrypted recording date, time, user and action.
- Easy input and recall of operating parameters and test protocols.
- User-friendly data tracking, searches, sorts, storage and output capabilities.
- Graphical representation of measurement data in real time.
- Auto-stop feature stops test when samples have reached equilibrium or by user entered elapsed time value.
- Complete system diagnostics.

**Principle of Operation**

Utilising our proprietary sensor technology to detect water vapour transmission rates, samples are clamped or attached to a diffusion chamber. Wet nitrogen is then introduced into the upper half of the chamber while a moisture-free carrier gas flows through the lower half.

Molecules of water diffusing through the sample into the lower chamber are conveyed to the sensor by the carrier gas.

**Sample Test Chamber**

This allows a direct measurement of the water vapour without using complex extrapolations. Water vapour transmission rate of the test sample is displayed as either g/m²/day or g/100in²/day.

**P₂O₅ Sensor**

To achieve an absolute measure, the technology draws upon a fundamental principle of physics.

The phosphorous pentoxide (P₂O₅) moisture sensor consists of a dual platinum winding formed around a quartz tube.

The change in the resistance across the windings creates a change in the measured current. According to Faraday’s Law this is directly proportional to the amount of moisture in the gas stream.
Systech Illinois’ range meets the requirement for the testing of any application.

Systech Illinois’ 7002 Water Vapour Transmission Analyser delivers the same high performance as the 7001 but with an extended measurement range for more demanding applications.

| Test Temperature Range | 5°C to 50°C (41°F to 122°F) |
| Test RH Range | 20 to 90% RH |
| Sample Size | 50cm², adaptors available for smaller samples |

**Operating Conditions**

- **Power Requirements**: 100-240 VAC, 50/60Hz, 840 VA (max)
- **Supply Pressure**: 1.7 bar regulated
- **Gas Fittings**: 1/8 in. Swagelok (supplied)
- **Enclosure**: Epoxy coated heavy gauge steel
- **Dimensions**: 533 x 533 x 305 (mm)
- **Weight**: 23.6kg

**Options**

- **Expansion Modules 7011**: Available for simultaneous WVTR analysis of up to 12 samples
- **Environmental Chambers**: For package testing

Systech Illinois have over 30 years experience of providing analysis solutions for a wide range of industries. From our manufacturing plants in the UK and U.S we produce gas analysers for industrial process industries, headspace analysers for monitoring gas flushing of food products and our range of permeation analysers.
