The ZR800 Oxygen Analysers offer unsurpassed accuracy, reliability and flexibility under the most demanding on-line operating conditions.

Features & Benefits

- Non depleting, maintenance free, oxygen sensor
- Ambient air or traceable gas calibration
- Microprocessor controlled functions
- Extremely fast response
- Sturdy, reliable construction with three mounting options
- Large, autoranging LED display
- Unaffected by vibration or position
- Specific to oxygen
- New hydrocarbon tolerant version for ultra high purity analysis
- 24VDC version

Conforms to European Directives:
Unmatched Speed in High Performance On-Line Oxygen Analysis

Applications
- Electronics
  - Solder Powder Production
  - Semiconductor Furnaces
  - Gas Quality
- Metals
  - Heat Treating / Annealing
  - Steel Production
  - Pure Metal Production
- Pharmaceutical
  - Inert Packaging
  - Fermentation
  - Vessel Blanketing
- Process
  - Ceramics
  - Contact Lens Manufacturing
  - Food Packaging
  - Glass/Fibre Optics
  - Inert Gas Welding
  - Lamp Manufacturing
  - Solar Cell Manufacturing
- General
  - Gas Production
  - Controlled Environments
  - Glove Boxes
  - Oxygen Deficiency
  - Research & Development

Unmatched Performance
Fast. Accurate. Reliable. Flexible. These characteristics are found in Systech’s process oxygen analysers. The ZR800 Series Oxygen Analysers are capable of measuring from 0.1ppm up to 100% oxygen in most industrial gas streams. With a response time and accuracy unparalleled in the industry, the ZR800 has found wide acceptance in the electronics, semiconductor, food processing, and gas manufacturing industries. These microprocessor controlled instruments have user-friendly menu driven software to customise the analyser to meet your requirements. The ZR800 series is specifically designed to provide ultra fast oxygen analysis and performance you can count on.

Cabinetry & Mounting
Three different configurations to match your needs.
- Panel or bench mount
- NEMA 4X / IP66 waterproof and weatherproof
- 19 in. rack mount

Operator Interface / Diagnostics
- User-friendly menu
- Read-only mode available
- Diagnostic capabilities
- Fault alarms

Sampling Systems
- Bypass flowmeter
- Pressure regulator
- Sample pump
- Flow alarm
- Auto Calibration
- Cartridge Filter Kit

Outputs & Alarm Options
For charting, process control, or remote monitoring
- RS232 / 485
- Analogue outputs
- High / low alarms
- Fault alarms
- Flow alarm

Precision Sensors
All ZR800 Oxygen Analysers utilise precision Zirconia Oxide sensors for accurate detection of oxygen.

Basic Principle of Operation
The oxygen detection cell is a high purity, high density, stabilised zirconia ceramic. The sensor produces a voltage signal relative to the oxygen concentration of the sample gas stream. The cell’s logarithmic output is converted and linearised by a high speed microprocessor to provide a direct digital readout on the instrument’s LED display.

Zirconia Oxide Sensor Theory
The conventional zirconium oxide cell consists of a zirconium oxide ceramic tube plated with porous platinum electrodes on its inner and outer surfaces. As the sensor is heated above 600°C, it becomes permeable to oxygen ions (O₂⁻) with vacancies in its crystal lattice structure permitting their mobility. Because of this, the sensor becomes an oxygen ion-conducting electrolyte.

The electrodes provide a catalytic surface for the change in oxygen molecules, O₂, to oxygen ions, and oxygen ions to oxygen molecules. Oxygen molecules on the high concentration reference gas side of the cell gain electrons to become ions which enter the electrolyte. Simultaneously, at the inner electrode, oxygen ions lose electrons and become released from the surface as oxygen molecules.

When the oxygen concentration differs on each side of the sensor, oxygen ions migrate from the high concentration side to the low concentration side. This ion flow creates an electronic imbalance resulting in a DC voltage across the electrodes. This voltage is a function of the sensor temperature and the ratio of oxygen partial pressures (concentrations) on each side of the sensor.

The relationship between the oxygen concentration of the unknown gas, the oxygen concentration of the reference gas (typically air which is 20.9% oxygen by volume), the temperature, the voltage output, and the cell constant is defined by the Nernst Equation which states:

\[ E(mV) = \frac{RT}{4F} \log \frac{O_2 \text{ Ref. gas}}{O_2 \text{ Sample}} \]

Where:
- \( R \) = gas constant
- \( F \) = Faraday’s constant
- \( O_2 \text{ Ref. gas} \) = partial pressure of oxygen in air
- \( O_2 \text{ Sample} \) = partial pressure of oxygen in sample gas
- \( T \) = absolute temperature of Zirconia sensor

Stabilized ZrO₂ electrolyte
Platinum electrodes
Sample gas
Stabilized air reference gas
DC Voltage output
Ambient air reference gas
ZR800 Process Oxygen Analysers

**ZR810**
Bench/Panel Mount
190H x 237W x 410D (mm)
7.9 kg

**ZR820**
IP66/NEMA 4X
Wall Mount/Weatherproof
460H x 380W x 160D (mm)
15.5kg

**ZR830**
Rack Mount 4U - 19 inch
Houses 1 or 2 Analysers
178H x 484W x 410D (mm)
9.7kg (single unit)

### Technical Specifications

**Range**
Autoranging from 0.1ppm to 100%

**Accuracy**
- 10% - 100%: 0.2% absolute (max 2% of reading) and ±1 on the last digit shown
- 1% - 9.99%: 0.02% absolute (max 2% of reading) and ±1 on the last digit shown
- 100ppm - 0.999%: max 1% of reading and ±1 on the last digit shown
- 0.1ppm - 100 ppm: max 2% of reading and ±1 on the last digit shown

**Response Time**
90% of step change within 5 seconds

**Repeatability**
0.2% of measured value

**Measuring Cell Type**
Stabilised zirconia sensor

### Operating Conditions

**Sample Inlet Pressure**
0.25 to 4 Barg

**Sample Flow Rate**
Approximately 150cc/min

**Sample Temperature**
-5 to 50°C

**Ambient Temperature**
-5 to 50°C

**Sample Humidity**
0-99% non-condensing

**Sample Connections**
1/8” OD compression fitting

**Communications**
USB/RS232/RS485

**Unsuitable Gases**
H₂S, Ammonia, Corrosive gases, Hydrocarbons, Combustibles, Hydrogen, Carbon Monoxide, NO₂, Halogens, Halogenated Hydrocarbons, Sulphur containing compounds, Lead containing compounds.

**Note**: Optional version for use with gases containing low ppm levels of hydrocarbons, combustibles, hydrogen and carbon monoxide for high purity analysis.

### Power Requirements

**Power Supply**
90-260 VAC, 50/60 Hz, 80 VA, 24 VDC version option.

**Display Type**
4 digit high visibility LED

### Options

**High/Low Alarms**
2 Volt free changeover contacts. Rated 240VAC / 5A

**Analogue Outputs**
Scaleable 4-20mA, 0-20mA, 0-10V, 0-100mV, all isolated, optional for one channel or three

**Autocalibrate**
 Provision for remote calibrate start and autocal in progress

**Sample Stream Options**
Bypass flowmeter, Sample pump, Flow alarm, Stainless steel sample system in place of brass/copper.

**Nitrosave**
O₂ measurement and control system ZR8500
